

# Infertility: Nursing and Care

## Abstract

Mrs Divya Raghavan, Lecturer, MCH Department, College of Nursing,  
[divyam@squ.edu.om](mailto:divyam@squ.edu.om)

### Role of Nurse in Infertility management: A Holistic approach

**Introduction:** Infertility is a lifetime crisis of deepest nature. Majority of couples spend most of the time of their reproductive age in planning to prevent unplanned pregnancy, assuming that, the process of childbearing would happen spontaneously as they wish. In such situations, inability to conceive would break them completely and bring complete havoc in the family system as whole.<sup>1</sup>

Infertility management and treatment has taken a leap forward in the last decade, with lots of advancements and technology being embedded into the management process. However the role of nurse midwife remains underrated in the treatment and management of infertile couples.<sup>2</sup>

**Objective:** The aim of the author is to present a concept poster explaining role of nurse in management of Infertility through an holistic approach by integrating psychological and spiritual care with the already existing medical treatment to overcome the growing challenges of providing care to infertile couple.

### Discussion

#### Standards of Holistic Nursing practice in management of Client with Infertility

Holistic nursing care in management of couple with infertility would include the involvement of three main components of couple and family i.e. mind body and spirit. It would require deep understanding of how these three components interact between couple and family to deal with the challenging process of infertility management.<sup>2</sup>

The nurse would require to work as a team member to provide complete care and support to couple with infertility with her major role being of a communicator, team leader, patient advocate and a counselor.

Caring for the infertile woman. Increasing numbers of women are seeking infertility services. Much of the basic work-up for infertility can be accomplished by a generalist (OB/GYN, CNM, or nurse practitioner), but if the patient does not conceive in a few months, referral to an infertility specialist is essential. Infertility nurses come from a variety of training backgrounds, but the vast majority have previous experience in women's health care.
